# SAGE II Status

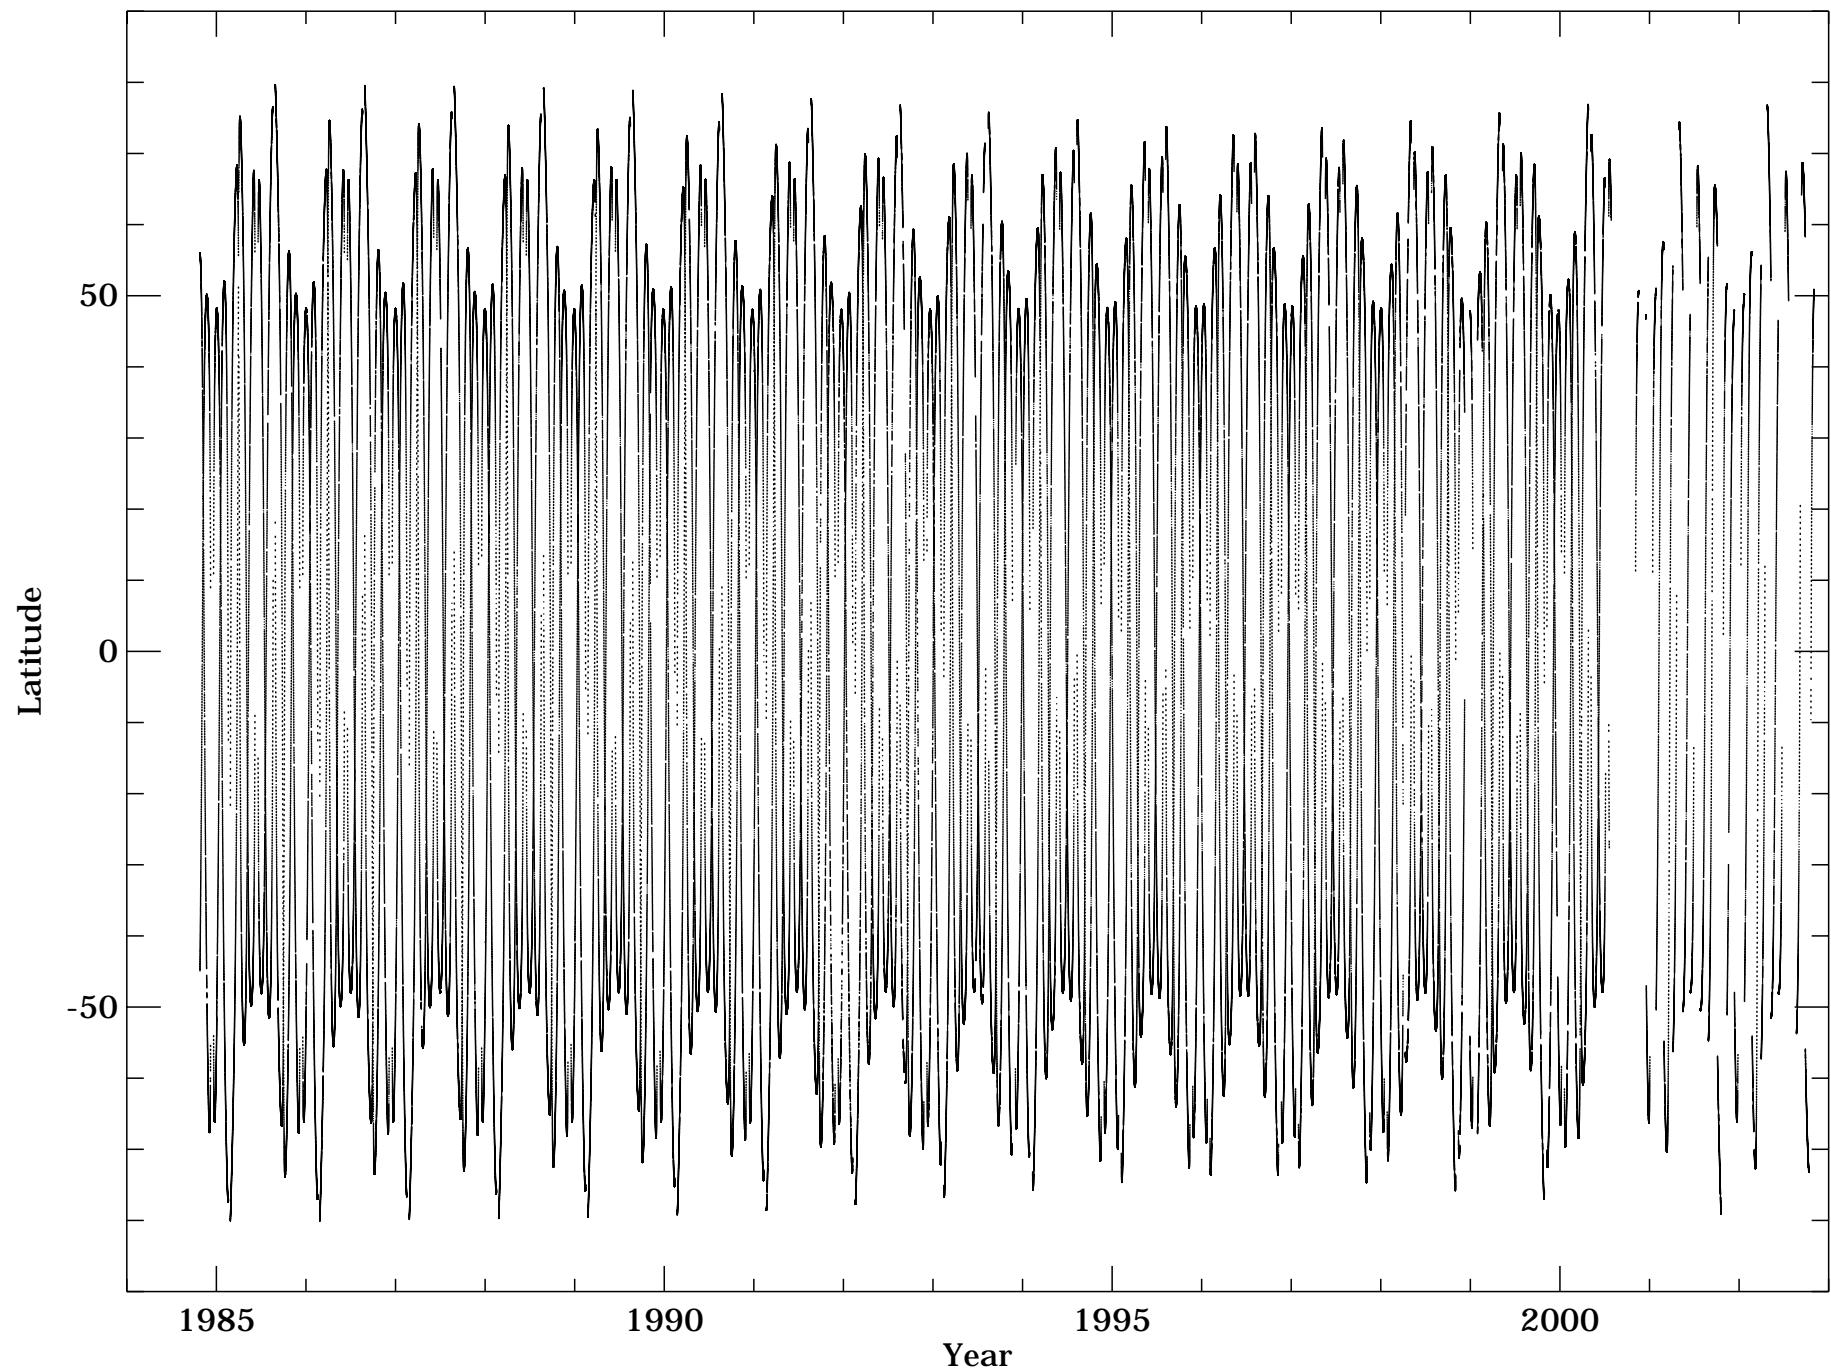

Joseph M. Zawodny

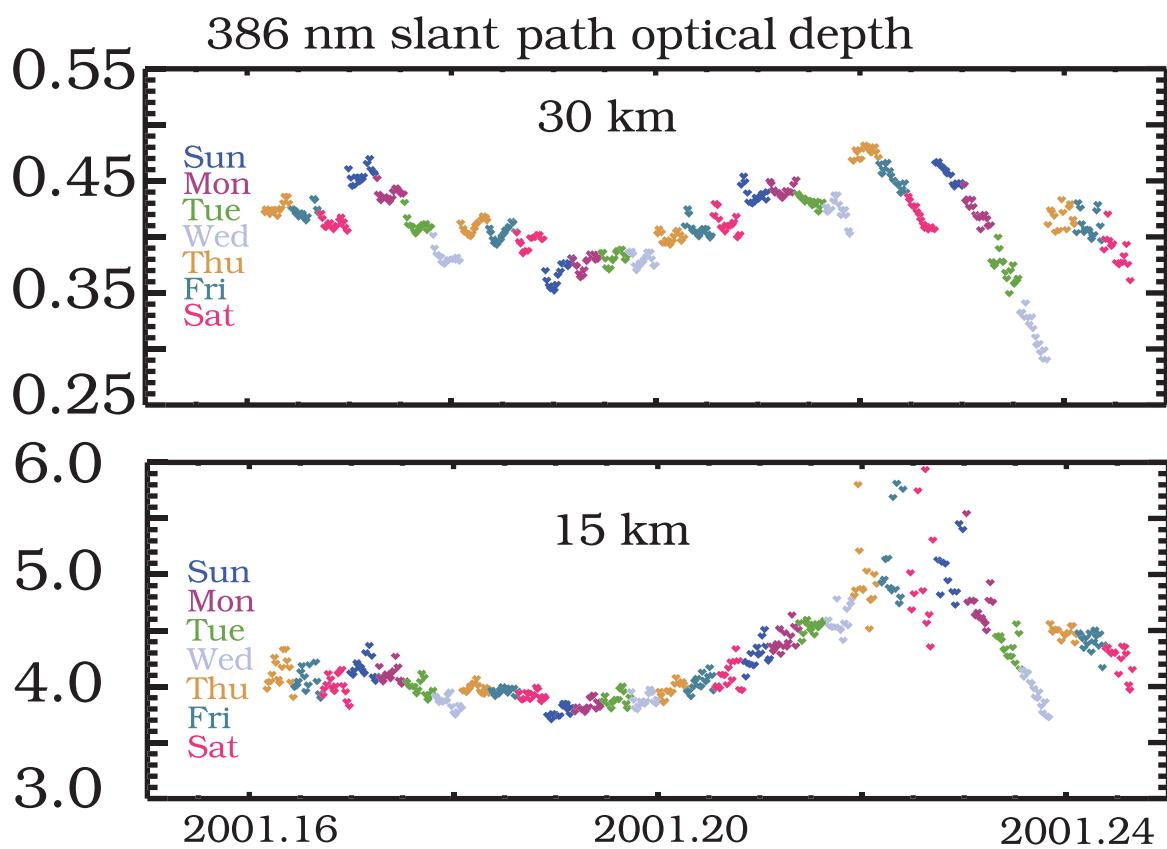

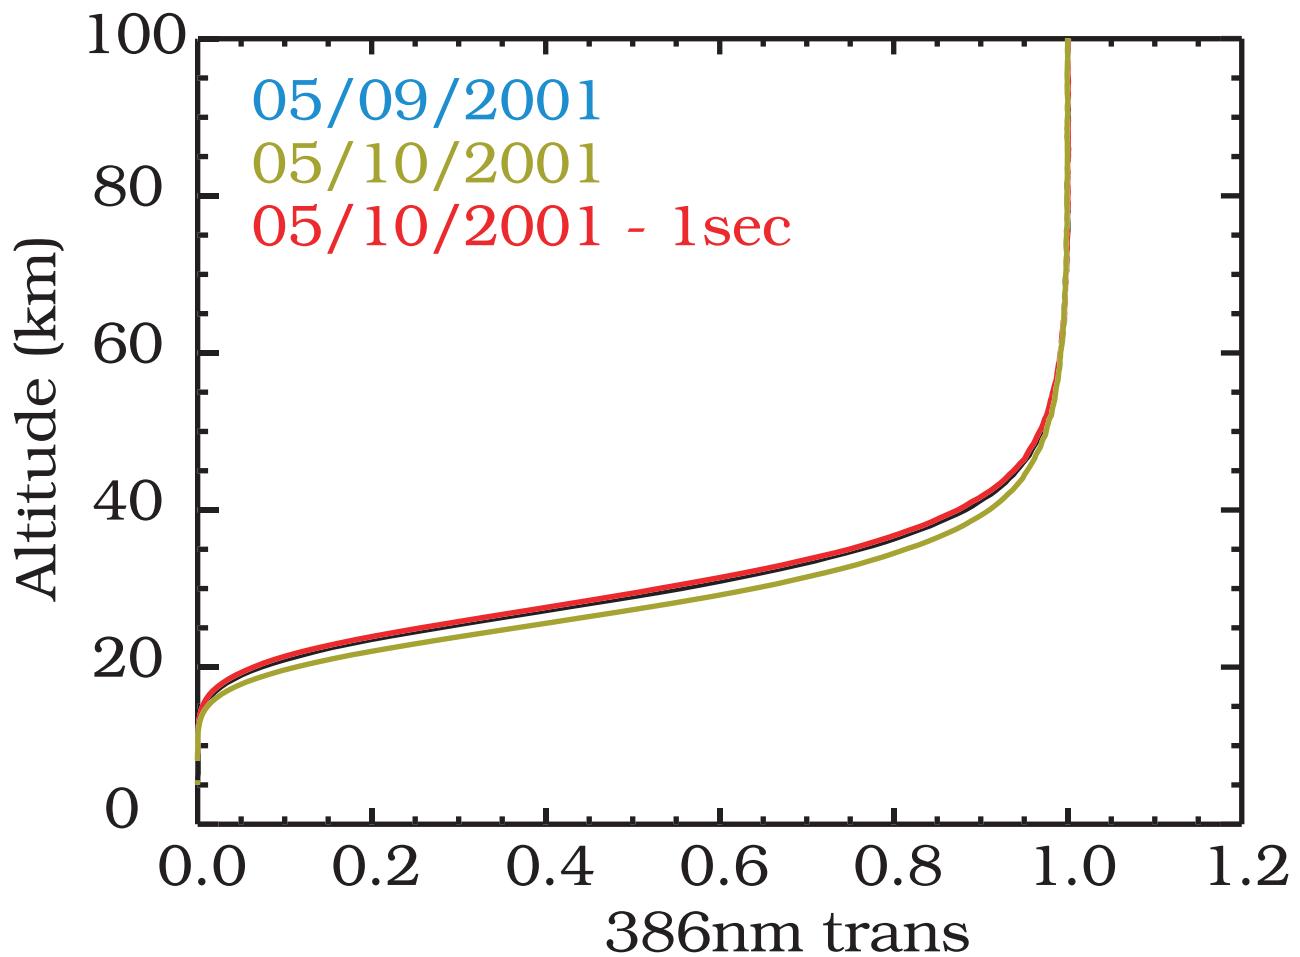

# ERBS Operational Status

---

- ERBS continues to operate nominally
- SAGE II is still operating after 18 ½ years
- Duty cycle reduced to 50% after gimbal failure in mid-2000
- Version 6.1 data released up through mid-2000
- Change in orbital ephemeris software introduced artifacts beginning in early-2000
- New ephemeris from GSFC being evaluated
- Version 6.2 with new H<sub>2</sub>O awaiting new ephem.

### Location of SAGE II events

# Exo-atmospheric transmission

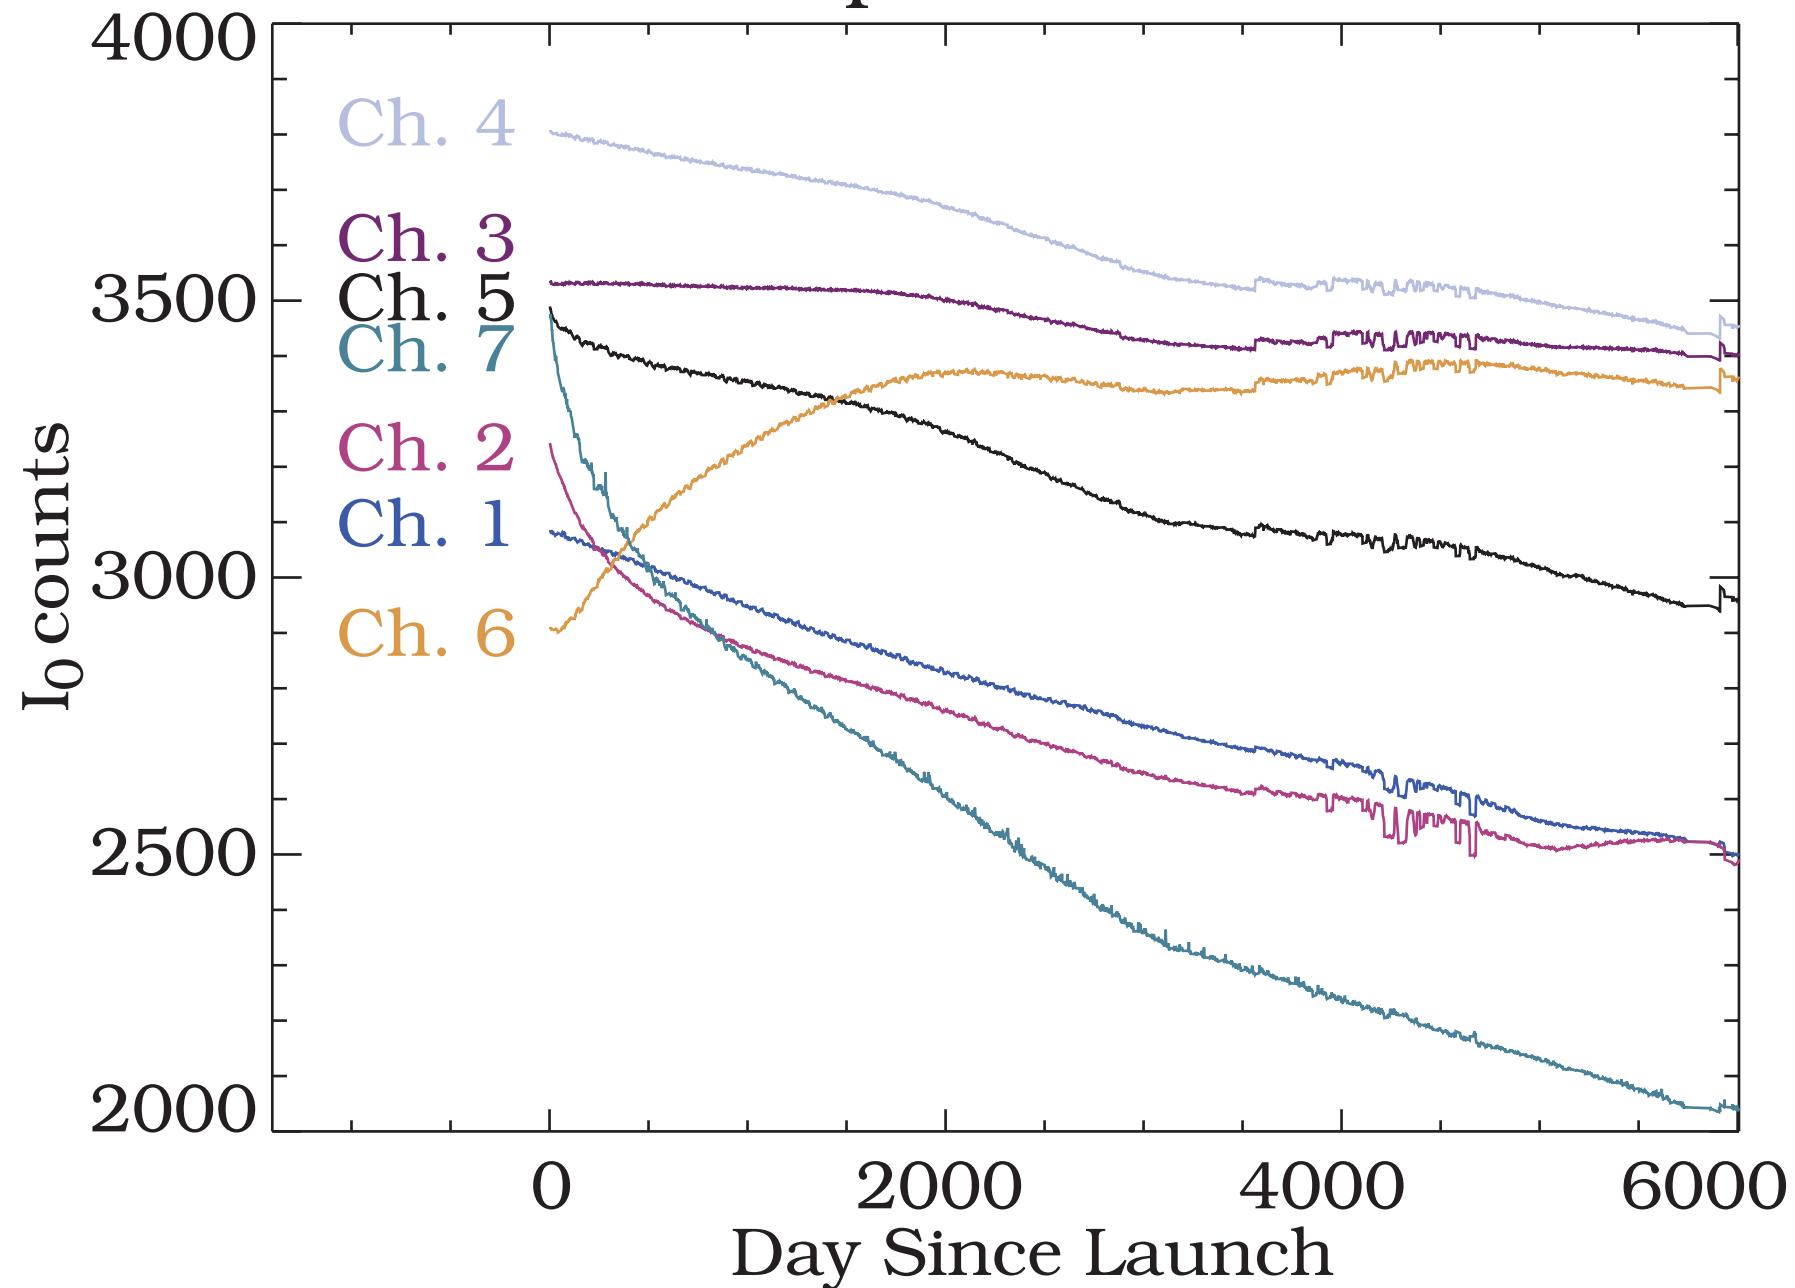

Fig. 1(a) SAGE II version 6.1

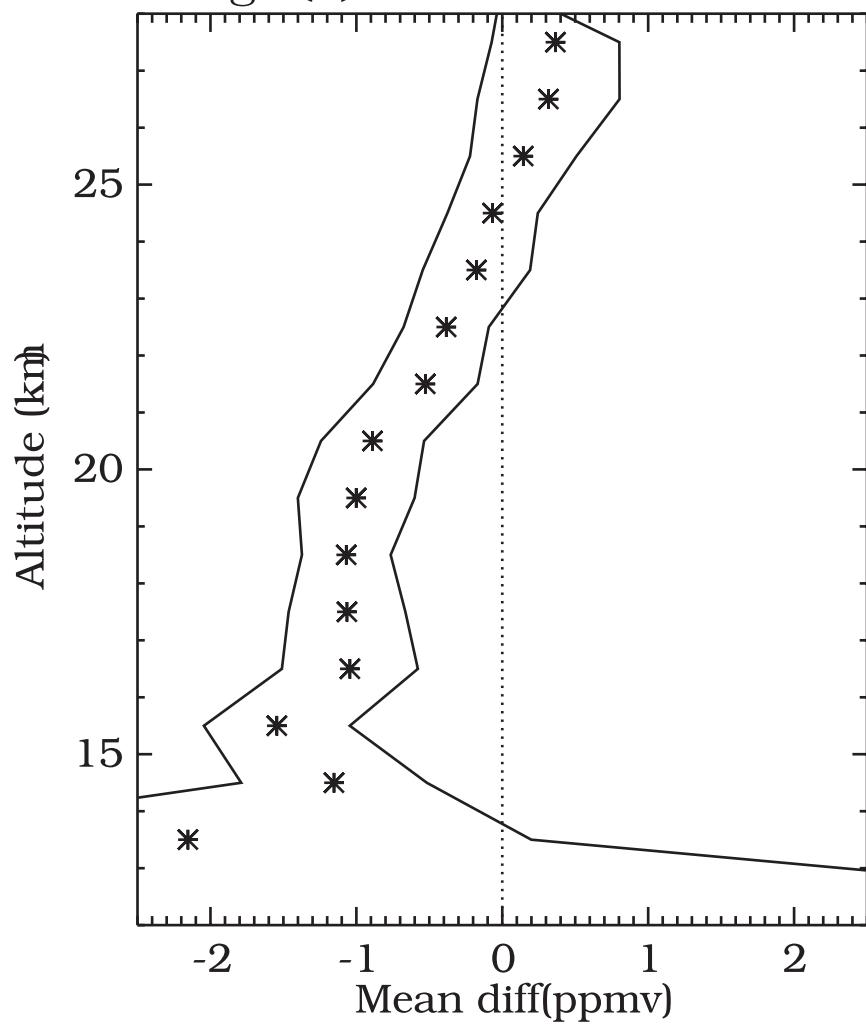

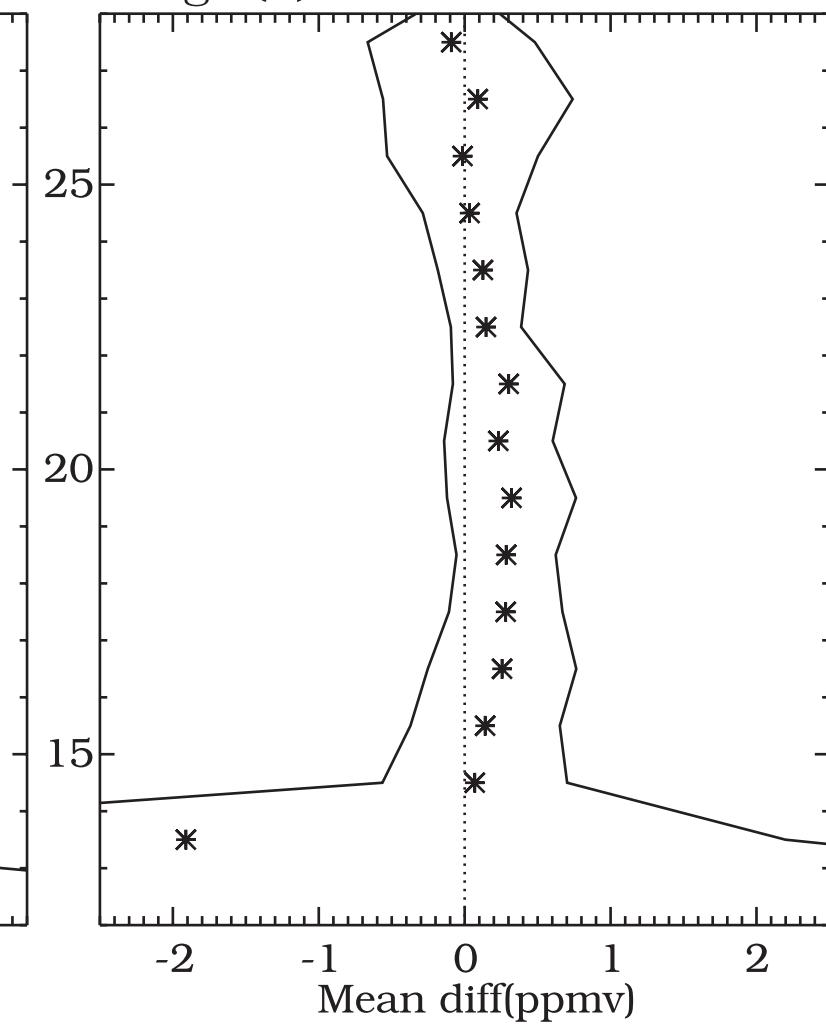

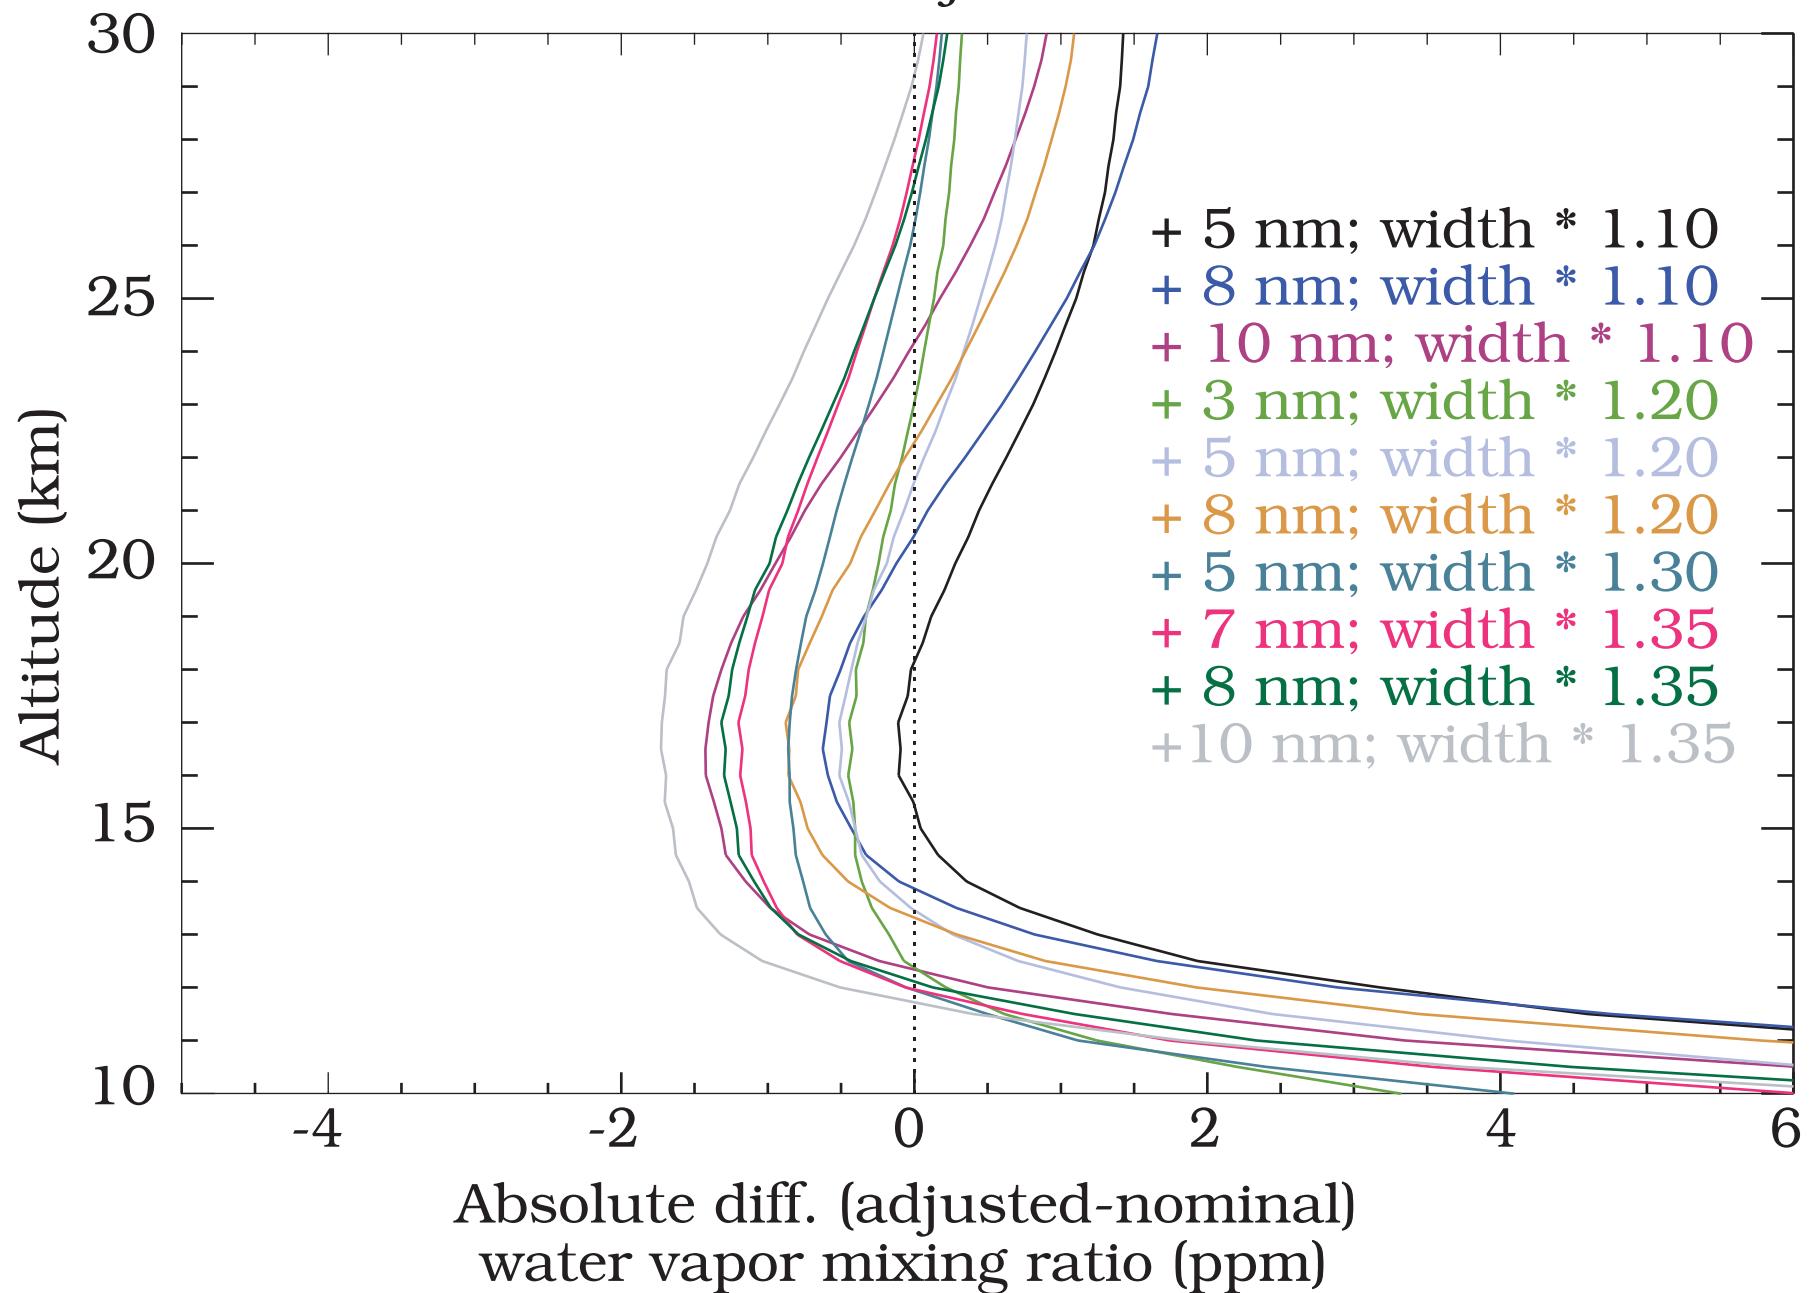

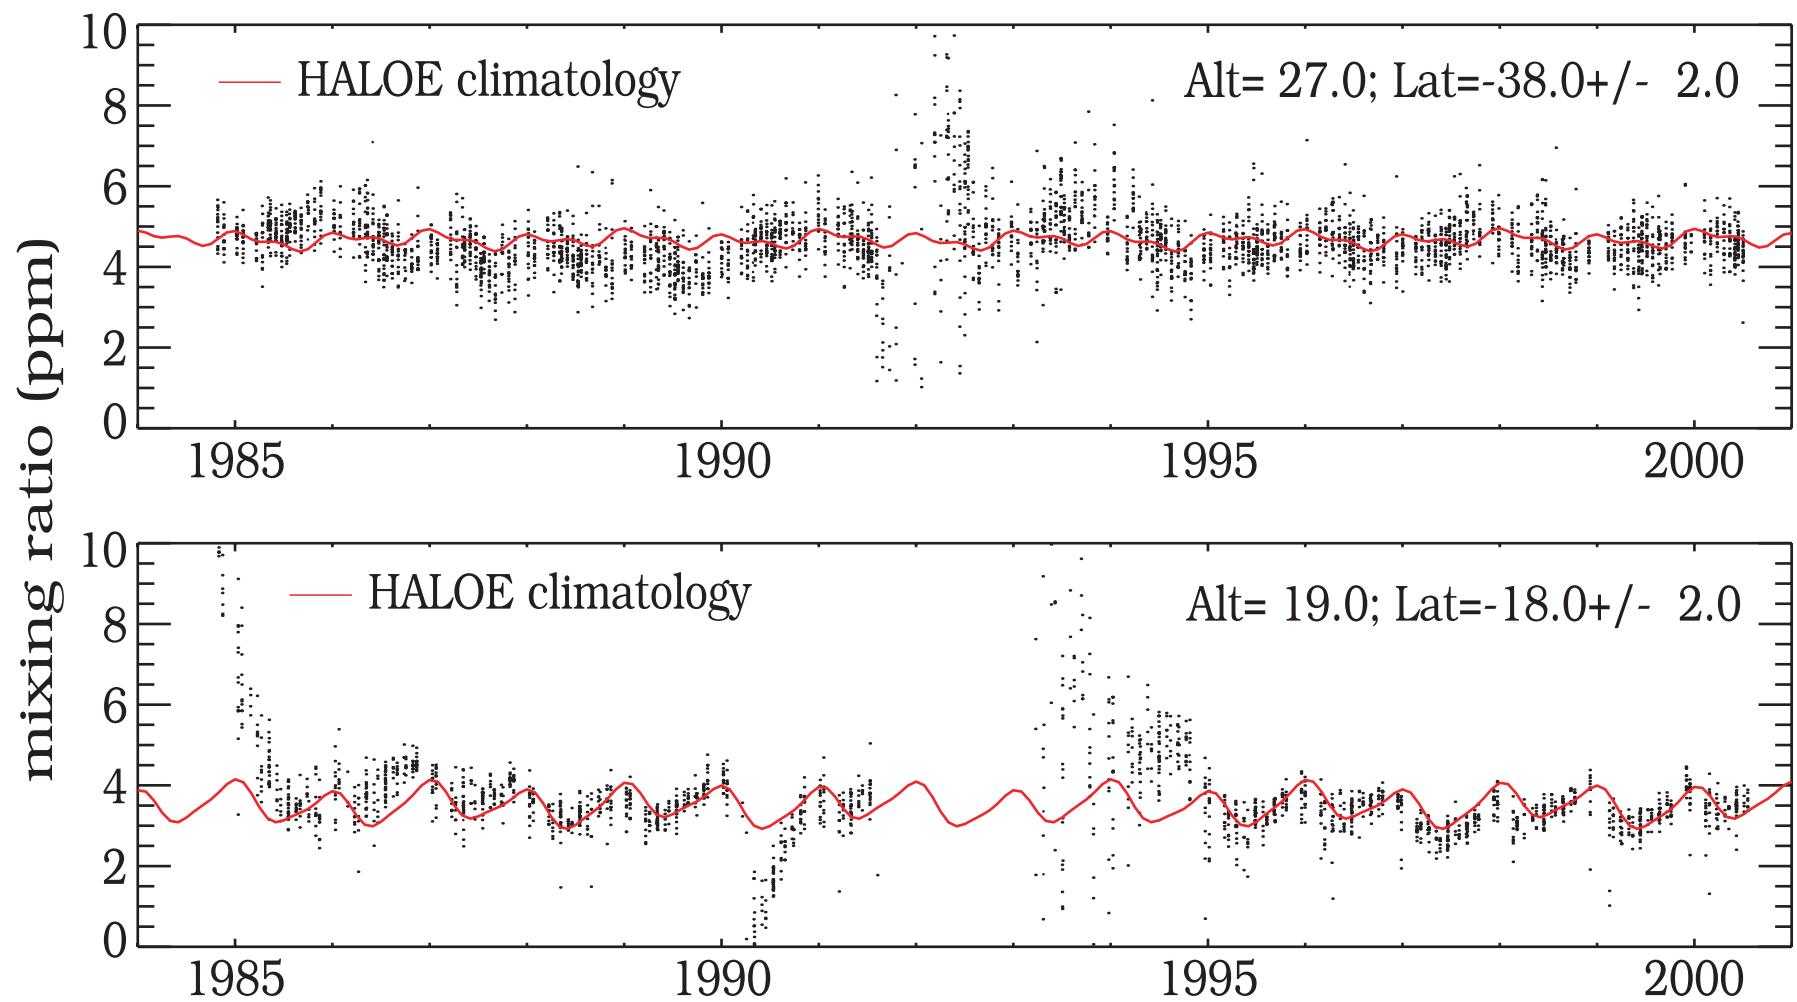

Fig. 1(b) SAGE II version 6.2

Pre-Pinatubo comparison: SAGE II versus Frost Point over Boulder, CO, for 29 coincident pairs of measurements from 1989 and 1990.

## Modtran model of adjustment to channel 2

# Future Work

---

- SAM II and SAGE I being reprocessed with V6 transmission algorithm
- Evaluating the Abel transform
- Packet-by-packet species separation
  - Improved redistribution of measurement errors
  - Natural isolation of spatial inhomogeneity
- Continuing 3D inversion efforts
  - Not continuing development of Tomography
  - Using a-priori spatial constraints from dynamics (PV-T) for ozone in the lower stratosphere, microphysics (T and or wave activity) for aerosols/PSCs, or photochemical models for NO<sub>2</sub>
